

# Dell Boomi Services

## CONNECTING BUSINESSES THROUGH POWERFUL INTEGRATIONS

In the present digital era, most companies are trying to streamline, organize, and simplify their processes into a cohesive whole using integration tools and platforms. To help them successfully achieve that, Boomi is a preferred ETL platform.

Boomi, a Dell Technologies business, with its unified platform can help you accelerate the flow of data across applications and systems.

Since every business is unique, a defined integration model won't work for everyone. Furthermore, with every business having its own set of goals and needs, personalization is inevitable. So implementing and managing Boomi is challenging.

That's why many organizations partner with Boomi service providers to tie together all parts of their business in a customized manner. So, if you want an all-in-one partner to assist you right from implementation to support for Dell Boomi, Grazitti is the answer to it. Our offerings include:

### 1. Any to Any Integration Model

Our team of experts can integrate your legacy applications/platforms using Boomi, enabling a streamlined flow of data

### 2. Hybrid Integration

Fast-track innovation, enhance efficiency and lower risk by integrating cloud and on-premises applications/platforms without any data syncing challenges

### 3. IoT sensors integration

Integrate your applications and devise data seamlessly by making optimal use of data integration

## Our Boomi Services include:
